

CLOUD COMPUTING

The resources you need, when you need them.

Storing and accessing your software applications over the Internet or “in the cloud” instead of on your computer’s hard drive offers many advantages: mobility, security, collaboration, efficiency and cost savings, to name a few. With Nuvodia, you can access hosted applications, also called Software-as-a-Service (SaaS), and store data on our private, secure cloud-computing platform.

Our cloud-based services give you the flexibility you need and access to popular software applications without having to purchase expensive licensing agreements, additional hardware or upgrades. Nuvodia purchases, manages and updates the software.

Cloud Solutions include:

- Web
- Office Suite
- Databases
- Servers and storage
- SharePoint
- Custom applications
- Email
- 24x7x365 help desk support

Things to think about:

- How secure is the data that lives in the cloud? What additional security measures might be put in place?
- An open infrastructure may eliminate complexities, but it may open cloud data to unwanted access.
- Automating cloud uploads and downloads can create organizational efficiencies.
- The more resilient the cloud technology, the greater the chance for cloud availability, quality and performance.
- Seamless connectivity between public and private clouds and traditional IT models can be a powerful resource.

Let us show you how.

Find out how Nuvodia’s tailored IT solutions can help you. Call us today.
